VOLUME ONE

1 Asset management

3 Managing sewer assets through integrated data acquisition
N. Scarlett J. Grandison & N. Rothwell

9 Analysis or water industry assets using advanced spreadsheeting
A. Selby

15 Strategic infrastructure asset management within NWL
E. Jennings

21 A case based reasoning approach for underground water asset management
K. Vairavamoorthy  J. Yan & N. Trifunovic

27 Wilco-State of the art decision support
M.O. Engelhardt & P.J. Skipworth

33 Pipe level estimation of burst rates in water distribution mains
J.B.Boxall  A. O’ Hagan  S. Pooladsaz A.J. Saul & D.M. Unwin

39 A decision support framework for short-time rehabilitation planning in water distribution systems
O.Giustolisi  D.Laucelli & D.A. Savic

45 Application of a fuzzy Markov model to plan the renewal of large diameter buried pipes: a case study
Y. Kleiner  B. Rajani & R. Sadiq

51 Water distribution system failure analysis
O. Giustolisi & A. Doglioni

57 Estimating time of failure of ageing cast iron water mains under uncertainties
B. Rajani & S. Tesfamariam

65 A strategy for optimal replacement of water pipes integrating structural and hydraulic indicators based on a statistical water pipe break model
L. Dridi  A. Mailhot M. Parizeau & J.P. Villeneuve

71 Operations Management

73 Efficient energy management of large-scale water supply system
P. Bounds J. Kahler & B. Ulanicki

79 Saving energy while managing demand in water delivery systems
C.A. Diaz  B.W. Karney & A.F. Colombo

85 Encoms - An energy cost minimisation system for real-time operational control of water distribution networks
Z. Rao J. Wicks & S. West

91 Hydraulic reliability of pressurized water distribution networks for on-demand irrigation
L. Cozzolino  C. Covelli  C. Mucherino & D. Pianese
99 Robust optimization for feedback control design or booster disinfection systems
M. Propato J.G. Uber & O. Piller

105 Optimal pump scheduling for East Bay Municipal Utility District, Oakland CA. using the Derceto package
S. Bunn

111 Extraction or optimal operation rules for water distribution systems using multi-objective genetic algorithms and machine learning
I.B. Carrijo & L. Reis

117 Optimal pump scheduling: Representation and multiple objectives
M. Lopez-Ibanez T.D. Prasad & B. Peaechter

123 Hydraulic, water quality, and realtime control model of South West Moravian regional water supply system
R. Farmani P. Ingeduld D.A. Savic G.A.Walters Z. Svitak & J. Berka

129 Combined genetic algorithm-liner programming (GA-LP) procedure applied to the operation of the Fortaleza water supply reservoir system (Brazil)
L. Reis & T. Pinheiro

135 Reducing groundwater management costs by parallel simulation-based optimization
F. Thilo U. Junghans M. Grauer S. Kaden & J. Hillebrandt

141 Data Management, Calibration & Monitoring of WDS

143 Diagnosing error prone application of optimal model calibration
Z.Y. Wu & T.M. Walski

149 Genetic Algorithms for water distribution network calibration: a real application
A. Borzi E. Gerbino S. Bovis & M. Corradini

155 Calibration of the model of an operational water distribution system
A. Vassiljev T. Koppel & R. Puust

161 Effect of uncertainty on water distribution system model decisions
D. Sumer & K. Lansey

167 Advanced calibration of water distribution models using the Bayesian type procedure
Z. Kapelan D.A. Savic & G.A. Walters

173 Sampling design for calibration of water distribution system models by genetic algorithms
D. Kozelj S. Santl F. Steinman & P. Banoven

179 A simple sampling design strategy for water distribution systems
O. Giustolisi & M. Mastrorilli

185 Topological GIS-based analysis of a water distribution network model, Applications of the minimum spanning tree
H. Bartolin F. Martinez & J. Cortés
191 Analysis of Parameter Uncertainty on Water quality in Distribution Systems: Unsteady conditions
M.F.K. Pasha & K. Lansey

197 Yatesmeter to Optimal Real-time Control
L. Reynolds

203 Optimal location of water quality sensors in supply systems by multiobjective genetic algorithms
P. B. Cheung O. Piller & M. Propato

209 Calnel project: Building and updating water distribution models from GIS + CIS + O&M + SCADA
F. Maninez V. Hernandez H. Bartolin V. Bou F. Alvarruiz & J.M. Alonso

215 Pattern matching of the data to implement proactive network management
S. Mustard & M. Thornton

221 Study and applications of on-line optimal operation in typical urban water supply system of China
H.-B. Zhao C. Wu J. Gao W. Wu Y. Liu Q. Wang & W. Guan

227 Steady-state and Transient Analysis, Modelling and Simulation

229 Synthesising real water distribution network performance under pressure deficiency
M. Hayuli & R.M. Burrows

235 UDF Analysis using hydraulic modeling
W. de Schaetzen B. Beach & T. Mizuik

239 Dynamic behaviour of water networks controlled by pressure reducing valves
S. Prescott B. Ulanicki & J. Renshaw

245 Comparison of hydraulic methods for network analysis considering head driven demand
K. Formiga F. Chaudry & L. Reis

251 ANN architectures for simulating water distribution networks
F. Martinez V. Bou V. Hernandez. F. Alvarruiz & J.M. Alonso

257 Field verification of a continuous transient monitoring system for burst detection in water systems

263 Slow transient pressure regulation in water distribution systems
O. Piller G. Gancel & M. Propato

269 Condition assessment of water transmission pipelines using hydraulic transients
D. Misiunas M. Lambert A. Simpson & G. Olsson

275 Unsteady friction models for conservative solution schemes in transient pipe flows
Y. Kim A. Simpson & M. Lambert

281 Coupled numerical simulation and sensitivity assessment under slow transient conditions
G. Gancel & O. Piller

LEMMO: Hybridising rule indication and NSGA II for multi-objective water systems design  
L. Jourdan D.W. Come D. Savic & G. Walters

51  Rehabilitation scheduling of water distribution systems based on multi-objective genetic algorithms  
S. Alvisi & M. Franchini

57  A multiobjective optimisation approach for the rehabilitation of hydraulic networks under uncertain demands  
C. Tricarico Z. Kapelan D. Savic & G. de Marinis

63  An ant colony non-dimensional algorithm for water distribution systems optimal design and operation  
A. Oslfeld & A. Tubaltzev

69  Simulated annealing reaches  
J. Sousa M. Cunha & J. Almeida Sa Marques

75  Optimal design or water distribution systems using cross entropy  
L. Perelman & A. Ostfeld

81  Optimal valve location in rehabilitation and design of pipe networks using a scatter search metaheuristic procedure  
S. Liberatore & G. Sechi

87  Fuzzy DSS model for water network design optimization  
L. S. Vamvakeridoou-Lyroudia G. Walters & D. Savic

93  A mixed optimisation-simulation technique for complex water resource systems analysis  
G.M. Sechi & A. Sulis

99  Research on optimal urban water network rehabilitation  
X. Jin W.-J. He B.-D. Han J. Zhang & H.-B. Zhao

105  Demand, Resource and Loss Management and Forecasting

107  A new look at peaking factors  
X.Zhang & S.G. Buchberger

113  Peak water demand for small towns  
C. Tricarico G. de Marinis R. Gargano & A. Leopardi

119  Preliminary results of water losses research in sections of Belgrade Water Supply System and developing of technical guidelines and procedures  
B. Babic D. Prodanovic & M. Ivetic

125  Evaluation of unaccounted for water and real losses in water distribution networks by hydraulic analysis of the system considering pressure dependency of leakage  
M. Tabesh A.H. Asadiani Yekla & R. Burrows

131  The effect of pressure on leakage in water distribution systems  
J.E. van Zyl & C.R.I. Clayton

137  Leakage reduction and custumer level of service improvement by pressure management

235 Quality optimization models in water networks  
R. Pérez J. Quevedo A. Gil G. Cembrano V. Puig & J. Figueras

241 Automated critical asset analysis (CAA)  
T. Merrifield

247 Improving the electronic security of water control systems  
P. Davis

251 Optimal allocation or monitoring stations aiming at an early detection or intentional contamination of water supply systems  
L. Cozzolino C. Mucherino D. Pianese & F. Pirozzi

257 Assessing the spatial distribution of pressure head in municipal water networks  
I. Pallavicini R. Magini & R. Guercio

263 Water supply looped systems design. Pipe failure and pressure distributions. Pressure restrictions and design procedures.  
M. Malafaya-Baptista

269 Quantifying the performance of water distribution system as a result of failure  
M.A.M. Mansoor S.D. Gorantiwar & K. Vairavamoorthy

275 Investigation of burst-prediction formulas for water distribution systems by evolutionary computing  
L. Berardi D. Savic & O. Giustolisi

281 Urban Drainage and Data Management, Calibration and Monitoring of WDS

283 Modelling floodwater in urban drainage  
E.J. Gill & R.D. Aradas

289 FastNett optimised flooding solutions  
R. Long & S. Hogg

295 Transition rule configuration for cellular automata based optimal sewerage design  
Y. Guo G. Walters S.-T. Khu & E. Keedwell

301 Realtime control of sewer systems developing solutions for the water industry  
D.M. Unwin & A.J. Saul

307 Aspects and effectiveness of real-time control in urban drainage systems combining radar rainfall forecasts, linear optimization and hydrodynamic modeling  
H.R. Verworn & S. Kramer

313 Sewer flooding register development: Building on the present to fulfil the future  
J. Perriam M. Roden & N. Muggeridge
