Water Distribution System Analysis Conference 2012 - WDSA 2012
List of papers

Network optimization

Assessing the impact of alternative pipe groupings on multiobjective water distribution network calibration
Masoud Asadzadeh, Bryan A. Tolson

Using parallel computing to increase the speed of water distribution network optimization
Ehsan Roshani, Yves Filion

Retraining of metamodels for the optimisation of water distribution systems
Weiwei Bi, Graeme C. Dandy

A decision support tool for operational optimization in WDNetXL
Luigi Berardi, Daniele Laucelli, Orazio Giustolisi

A new NLP-DE hybrid optimisation model for water distribution system optimisation
Feifei Zheng, Angus R. Simpson, Aaron C. Zecchin

Battle of the Water Networks II

Battle of the Water Networks II: Combining engineering judgement with genetic algorithm optimisation
Christopher S. Stokes, Wenyan Wu, Graeme C. Dandy

Typical design practice applied to BWN-II system
Thomas Walski

A multi-step approach for optimal design of the D-Town pipe network model
Stefano Alvisi, Enrico Creaco, Marco Franchini

Parallel evolutionary multiobjective optimization of water distribution system design
Michele Guidolin, Guangtao Fu, Patrick Reed

A hybrid of multi-phase optimisation and iterated manual intervention for BWN-II
Qi Wang, Haixing Liu, Kent McClymont, Matthew Johns, Edward Keedwell

Network models

Re-designing a modern city’s water supply system
Roger Crozier, Jack Foster, Aude Fumex

Unbiased and accurate assessment of surrogate measures of hydraulic reliability of water distribution systems
Salah Saleh, Euan Barlow, Tiku T. Tanyimboh

A new method of modelling and simulation of water networks with discontinuous control elements
Daniel Paluszczyszyn, Piotr Skworew, Bogumił Ulanicki

Zero flow problem in the EPANET solver
Yuriy Kovalenko, Nikolai Gorevz, Inna Kodzhespirova, Rogelio Alvarez, Eugenio Prokhorov
Applications and management of a large water distribution system model for the city of Tshwane, South Africa
B.F. Loubser, K.A. Fair, F.I. Sherrif

**Water distribution systems as microbiological systems**

Assessment of particle associated bacteria in unchlorinated drinking water from three treatment plants by cultivation-independent methods

Comparison of bacteriological water quality in four parallel pilot distribution systems
K. Braun, Rolando Fabris, Jim Morran, L. Ho, D. Hoefel, Mary Drikas

Produce and supply biological stable drinking water by different advanced treatments
G. Liu, M. Lutz, J.Q.J.C. Verberk, J.C. Van Dijk

A field study of suspended solids characterisation in drinking water distribution system: influence of changing treatments
G. Liu, H. Gaog, G.L. Bakker, J.Q.J.C. Verberk

**Network optimization**

Comparing methods of parallel genetic optimization for pump scheduling using hydraulic model and GPU-based ANN meta-model
Zheng Yi Wu, Morad Behandish

Optimisation and compliance with headworks design criteria for a complex system
Kandiah Mahadeva, Graham Begg, George Kuczera, Peter Littlejohns, Selvaratnam Maheswaran

Network topology analysis to support optimal design and performance evaluation of water distribution systems
Alireza Yazdani, Leonardo Duenas-Osorio, Qilin Li

Water distribution system greenhouse gas emissions reduction by considering the use of time-dependent emissions factors
Christopher S. Stokes, Holger R. Maier, Angus R. Simpson

**Battle of the Water Networks II**

The Battle of the Water Networks (BWN-II): PADDs based solution approach
Bryan A. Tolson, Ayman Khedr, Masoud Asadzadeh

Water distribution expansion planning with decomposition
Russell Bent, Carleton Coffrin, David Judi, Tim McPherson, Pascal van Hentenryck

Redesigning water distribution networks through a structured evolutionary approach
J.P. Matos, A.J. Monteiro, N. Matias
An energy based methodology applied to D-Town
J. Saldarriaga, D. Paez, D. Hernandez, J. Bohorquez

Optimal design of D-Town network using multi-objective harmony search algorithm
Do Guen Yoo, Ho Min Lee, Joong Hoon Kim

**Network models**

Sharing water modelling results to non-modelling users
Ririn Erinawati

Reliability assessment of water distribution networks using surrogate measures
Anna M. Czajkowska, Tiku T. Tanyimboh

A modified global gradient algorithm based on topological decomposition
Jochen Deuerlein, Angus R. Simpson

Lessons learned from restructuring a hydraulic solver for parallel computing
Olivier Piller, Mathieu Le Fichant, Jakobus E. van Zyl

Database driven hydraulic model creation procedure
Margus Koor, Raido Puust, Anatoli Vassiljev, Tiit Koppel

**Network water quality**

Controlling disinfection by-products within a distribution system through bubble aeration
Bryant E. McDonnell, Dominic L. Boccelli

ANN forecasting of water quality in the chloraminated goldfield and agricultural pipeline system: constructive input selection
Wenyan Wu, Holger R. Maier, Graeme C. Dandy

Understanding differences in sediment characteristics in drinking water distribution networks
Peter Schaap, Mirjam Blokker

Tailored solver for water quality simulation with merlion
Gabriel Hackebeil, Angelica Mann, Carl Laird

The structure and stability of drinking water biofilms
K. Fish, Richard Collins, R. Sharpe, A.M. Osborn, Joby B. Boxall

**Network optimization**

Optimal power use surface for design of water distribution systems
J. Saldarriaga, D. Paez, P. Cuero, N. Leon

Comparison of simplified methods for the optimisation of water distribution systems
Angela Marchi, Graeme C. Dandy
Metamodeling of a water supply system using a self-adaptive artificial neural network
Frederico Keizo Odan, Luisa Fernanda Ribeiro Reis

Comparison of a bulk water supply optimization technique to deterministic design guidelines
Ching-Chiao Chang, Jakobus E. van Zyl

**Battle of the Water Networks II**

The Battle Water Networks H: Combination of meta-heuristic technics with the concept of setpoint function in water network optimization algorithms
P.L. Iglesias-Rey, FJ. Martinez-Solano, D. Mora-Melia, j.V. Ribelles-Aguilar

High performance evolutionary optimization for Battle of the Water’ Network H
Zheng Yi Wu, Samir M. Elsayed, Yuan Song

Population-based search enabled by high performance computing for BWN-II design

Multiple-objective evolutionary algorithm approach to water distribution system model design
M.S. Morley, C. Tricarico, G. de Marinis

**Network models**

Simulating pressure control valves in Porteau
Olivier Piller, Raphael Ricklin, Denis Gilbert, Jakobus E. van Zyl

Hybrid graph partitioning approach for dividing a water distribution network into district metered areas
Ferrari Giada, Becciu Gianfranco

Impact of balance between investment and operational costs on resilience of water distribution networks
N. Trifunovic, L. Kanowa, K. Vairavamoorthy

Toward a rational design for fireflow tests for model calibration
Walter M. Grayman

**Network optimization**

Optimisation of pump operations in water distribution systems taking into account the seasonality of the demand
Angela Marchi, Angus R. Simpson, Mark A. Thyer, Samuel Sutanto, Nhu Cuong Do

Iterative linearization scheme for optimal operation of water distribution systems including leakage and cost at source
Eyal Price, Avi Ostfeld
A novel approach to optimal pump scheduling in water distribution systems

What can complex network theory and segment analysis tell us about resilience in a water distribution network?
D.W. Virden, C.J. Noakes, P.A. Sleigh, P. Coddington

A practice in optimal cost design of water distribution networks
Do Guen Yoo, Sang Myoung Lee, Hwandon Jun, Joong Hoon Kim

**Transient Analysis**

A practical approach to simulate the filling of pipelines using a 1D single-phase hydrodynamic model
S. van der Zwan, MJ. Tukker, A.G.T.J. Heinsbroek

Transient analysis and surge protection for a water distribution system incorporating prv dynamic response
Chengchao Xu, Eelko Van Der Vaart, Faris Hernich, Slobodan Krstevski

Parametric modelling study for filling of horizontal pipe containing water
Janek Laanearu, Ivar Annus, Monika Sergejeva, Tiit Koppel, Raido Puust

Case study: water hammer protection in long distance water pipeline with ultra-high lift
Jinliang Gao, Meiling Diao, Yongwei Zhuang, Shihua Qi, Wenyan Wu

Distributed deterioration detection in single pipes using the impulse response function
Jinzhe Gong, Martin F. Lambert, Angus R. Simpson, Aaron C. Zecchin

CFD simulation of air transport in water supply pipeline T-junction
Wengi Yuan, Suiqing Liu

**Asset management**

Continuous assessment of a drinking water PVC pipe
A.M. Arsénio, Jan Vreeburg, M.P.C. Wielinga, J.C. Van Dijk

Variations and trend in water distribution networks breaks
M. Maglionico, S. Cipolla, I. Stojkov, M. Tavernelli

Multiple leakage localization and leak size estimation in water networks
N. Abbasi, H. Habibi, C. Hurkens, M. Klabbers, A.S. Tijsseling, S.J.L. Van Eijndhoven

Development of diagnosis system for performance evaluation of water distribution network
Doojin Lee, Dohwan Kim, Cheolho Bae, Juhwan Kim

Destructive laboratory test with PVC push-fit joints
A.M. Arsénio, Jan Vreeburg, F. Boumaz, J.C. Van Dijk
List of papers

Flexible water distribution system design under uncertainty
Innocent Basupi, Zoran Kapelan

**Contaminant intrusion and water security**

Field validation of intrusion modeling inputs: external heads and contamination levels of water in valve vaults and groundwater
Gabrielle Ebacher, Marie-Claude Besner, Michele Prévost

Intrusion and leakage through cracks and slits in plastic (MDPE) pipes
Richard Collins, Sam Fox, Stephen Beck, Adrian Saul, Joby B. Boxall

Contamination event detection utilizing genetic algorithm
Jonathan Arad, Mashor Housh, Lina Perelman, Avi Ostfeld

Optimal operation of multi-source water distribution system to evade source contamination introduction
Wenyan Wu, Jinliang Gao, Lianbo Zhouz, Shihua Qi

Modelling the loss of nitrification inhibitor dosed in water distribution systems subject to pipe corrosion
Weixi Zhan, Arumugam Sathasivan

**Network operations**

Particle production by different levels of water treatment and subsequent behaviour in the distribution network
A. Byrne, K. Braun, Rolando Fabris, Jim Morran, Mary Drikas

Optimizing pressure logger placement for leakage detection and model calibration
Zheng Yi Wu, Yuan Song

Extensive sediment characterization during unidirectional flushing in a distribution system
Marie-Claude Besner, Poly Rani Modak, Natasha Glauserz

Understanding energy pricing for water pumping
Thomas Walski, Wayne Hartell

Comparison of metaheuristic algorithms for pump operation optimization

**Asset management**

Predicting water distribution system failures: a shared frailty approach
Robert M. Clark, Robert C. Thurnau

Reducing customer minutes lost by anomaly detection?
M. Bakker, Jan Vreeburgz, L.C. Rietveld, Maurice van de Roer
Apparent water loss due to consumer meter inaccuracies in selected areas of South Africa
F.A. Couvelis, Jakobus E. van Zyl

Event-based network rehabilitation planning and asset management
Ehsan Roshani, Yves Filion

A two-way approach to leakage determination: sophisticated demand modelling and discriminative demand pattern analysis
Peter van Thienen, Ilse Pieterse-Quirijns, Maurice van de Roerz, Jan Vreeburg

Network optimization

A performance comparison between genetic algorithms and differential evolution variants for water network optimisation
Feifei Zheng, Aaron C. Zecchin, Angus R. Simpson, Duncan Keall

Non-probabilistic approach for the optimal design of water distribution systems under demand uncertainty
Lina Perelman, Mashor Housh, Nurit Oliker, Avi Ostfeld

Optimization model for identifying unknown valve statuses and settings
Zheng Yi Wu, Yuan Song, Juned Laiq Syed

Sufficiency of data loggers for optimized model calibration of water distribution networks
Juned Laiq Syed, Zheng Yi Wu, Hind Saif Al Nuaimi

Network water quality

Water treatment plant generation of rapid monochloramine decay
David Cook, Jim Morran, Werner Mobius

Laboratory study of the water quality in WDS using biological reactors
Yuebin Wu, Ying Xu, Wei Wang, Yang Yao

Optimized water quality for the reduction of distribution system problems
Rolando Fabris, K. Braun, Jim Morran, Mary Drikas

Analysis of multi-parameter water quality data using event detection software on laboratory simulated events
Ant Leeder, Stephen R. Mounce, Joby B. Boxall

Network vulnerability

Hydraulic modelling approaches for risk management of water supply in emergencies
James Innes, Cath Fernandoz, Patrick Tunnah, Ben Davis

Application of web-based tools for infrastructure protection, water security and consequence assessment
William B. Samuels, Rakesh Bahadur, Christopher Ziemniak
Multiple-criteria decision analysis for proactive management of risk of water distribution systems
Rodrigo Freitas Lopes, David Antunes, Maria da Conceicao Cunha

Reliability analysis of the water distribution network of Oslo using WDNetXL
R. Ugarelli, J. Rostum, Orazio Giustolisi

**Network real time and predictive operations**

Real-time pump scheduling using genetic algorithm and artificial neural network based on graphics processing unit
Zheng Yi Wu, Morad Behandish

A management strategy for water supply systems
Michael Cresswell, Gholamreza Naser

Testing of the system for detection of pipe bursts and other events in a UK water distribution system
Michele Romano, Zoran Kapelan, Dragan A. Savić

Optimal pressure meters placement for bursts detection based on SOM
Haidong Huang, Tao Tao, Kunlun Xin

**Water usage**

Estimating peak water demands in hydraulic systems II — future trends
Mirjam Blokker, Irene Vloerbergh, Steven Buchberger

The use of an adaptive water demand prediction model
M. Bakker, Jan Vreeburg, L.C. Rietveld, T. Blom, Maurice van de Roer

Estimating peak water demands in hydraulic systems I — current practice
Steven Buchberger, Mirjam Blokker, Daniel P. Cole

A flow demand model for residential users
Federico Di Palma, Rudy Gargano

**Sustainable water distribution systems**

Life cycle energy analysis for sustainable pipe replacement scheduling
Monica Prosser, Vanessa Speight, Yves Filion

Water conservation planning for reduced system energy use based on land-use and geographic location
Alexandra Oldford, Yves Filion

Green infrastructures as a potential strategy for balancing supply and demand in water stressed regions

Refurbishment of large diameter pre-stressed concrete pipelines: B7 pipeline, a case in point
Khathutshelo Godfrey Maumela, Kirk Canary
List of papers

Contaminant intrusion and water security

Comparison between fixed thresholds and genetic algorithm methods for water quality event detection
Jonathan Arad, Mashor Housh, Lina Perelman, Avi Ostfeld

A Lagrangian-transient water quality model for contaminant intrusion in water distribution systems
Saheb Mansour-Rezaei, Gholamreza Naser

Real-time event detection: a model-based approach
Xueyao Yang, Dominic L. Boccelli

A weighted support vector machine classifier for contamination event detection in water distribution systems
Nurit Oliker, Avi Ostfeld

Network water quality

Ensuring safe water through advanced oxidation and real-time sensors
Ian L. Pepper, Samendra P. Sherchan, Syreeta L. Miles, Bradley O. Clarke, Shane A. Snyder

Modeling of free chlorine decay rate in the rand water distribution system
Mosa Mongalo, Muzi Sibiya, Given Skosana

Standard plate counts in distribution systems and drinking water safety
E.J. Ncube, M. Mohotsi

The effect of velocity on the maintenance of chlorine and chloramine residuals
Robert M. Clark, Christopher A. Impellitteri, Donald A. Schupp, Srinivas Panguluri

Asset management

The optimal leakage detection model for water distribution systems considering uncertainties in roughness coefficient
Jung Soo Yoon, Do Guen Yoo, Doo Sun Kang, Joong Hoon Kim

Water distribution networks rehabilitation based on a small information dataset
Antonino Fortunato, Claudio Arena, Mario Rosario Mazzola

Replacement of AC mains: combining several sources of information on the condition
Ralph Beuken, Roel Diemel, George Mesman, Kim van Daal

A practical scheme for building and assessment of water pipe renewal policies
Y. Tlili, A. Nafi

Network real time and predictive operations

Control system modelling for a large scale pumping station
Eelko Van Der Vaart, Chengchao Xu, Faris Hernich
Real-time demand estimation in water distribution systems under uncertainty
C.J. Hutton, Zoran Kapelan, L. Vamvakeridou-Lyroudia, Dragan A. Savić

Real-time hydraulic modelling of a water distribution system in Singapore
Ami Preis, Talha Obaid, Michael Allen, Mudasser Iqbal, Andrew J. Whittle

**Water usage**

An overview of water demand: volume vs pressure based demands
Thomas Walski, Orazio Giustolisi

Simplified emitter based approach for pressure-driven demand calculations of networks with extreme topography
N. Trifunovic, K. Vairavamoorthy

Development of water demand forecasting simulator and its performance assessment
Juhwan Kim, Gangwook Shin, Dooyong Choi

**Sustainable water distribution systems**

Developing scenarios for future utility provision
Bogumil Ulanicki, Anna Strzelecka, Piotr Skworcow, Tomasz Janus

Water, fire and safety: a strong relation with water quality
Jan Vreeburg, Ljiljana Zlatanovic, Ivars Poznakovs

Use of a physical water network competition for outreach and teaching
Jakobus E. van Zyl
